Frozen Semen Evaluation

Bull/Sire: STR Homeland

Client: Jordan Ritz

Type of Unit: .50 cc Thaw Temp: 35 Celsius

Collection Center: Vogler Semen Centre

Freeze Date: 05/10/2023

Post Thaw Motility

Time: 0 hour 60%

Less than 20% abnormal cells present

Conclusion

Laboratory evaluations attempt to predict the performance of semen in routine A.I. The results of this semen evaluation should in no way be used as a legal document certifying or condemning fertility. Rather it is only a guide to utilize the knowledge we currently have to discourage use of potentially inefficient semen.

This freeze date sample does meet or exceed the minimum industry standards of this laboratory under the strict handling of Vogler Semen Centre employees.
